

SYSTEM

1400

1,400 watts R.M.S.

Introducing **SYSTEM 1400**, a no-compromise Professional P.A. cabinet rated at an extraordinary 1,400 watts RMS. JBL's new Vented Gap Cooling technology gave designer Richard Priddle the tools; a pair of 2226 15" loudspeakers with a JBL 2" compression driver, designed into a compact passive cabinet.

Requiring no Processor or Active Crossover, **SYSTEM 1400** produces **more power** and **more bass** than Turbosound's TMS 3 or Meyers MSL 3. What's more, **SYSTEM 1400** does this with a **smaller cabinet** too.

SYSTEM 1400 is the first of a series of superior fully conceptualised designs. Audition it today, and hear the future.

SYSTEM FAMILY:

System SUB
(2 x 2226 15" Band-Pass loaded)
System 700

SYSTEM SPECS	Sens. 1w/1m	dB Cont	dB Peak	Response +/- 3dB
